- Multilanguage support (N, F, E, ??)
- Central payment with Banknotes, Coins, Proton,...
- Optional support of payment with fidelity card.
- Can give change money.
- Powerful operator options for detailed reporting.

Applications.

The CP400 is Central Payment System to concentrate all payment transactions in a 24/24 Laundrette. The users can select a free washing machine, dryer or mangling machine using a straight forward user interface on a touch screen. After selection, the user can pay with cash, or with a public or private cashless card. The CP400 will automatically activate the selected machines.

Modular Payment Options

The Antenor CP400 Central Payment System can be configured to accept banknotes, coins, Proton, BC/MC, fidelity card or any mix of these payment options. To maximise the availability of the service the CP400 can be equipped with a redundant banknote reader. When using a fidelity card, this card can optionally be purchased at the machine and can be recharged with an optional bonus system. A Happy Hour system can be programmed to make washing and drying more attractive during certain time-zones. This way, an operator can promote extremely attractive prices during off-peak periods.

Robust and Reliable

The G400-CP is extremely strongly built to resist attacks and vandalism. Built as a safe, the cabinet is made of 4mm steel. The door is over 7mm thick including a brushed stainless steel front plate; it has hidden hinges and a safe lock mechanism with 4 strong bolts. The automat weights over 100 kg and is additionally fixed to the wall. All these measures contribute to a very safe and vandal resistant automat.

All payment modules and accessories of the machine have been carefully selected by Antenor to assure the most reliable operation throughout its long life cycle.

User and Operator Friendly.

Thanks to an intuitive Graphical User Interface and the touch screen, the G400-CP will guide both novice and regular customers to an efficient service.

The product supports upto 4 languages which are selectable by the user on the spot.

The appearance of the screen during operation and at idle time can be personalised to match the house-style and to include a logo or commercial messages.

For a seamless exploitation, the CP400 keeps track of all transactions and money received. This data can be audited on the screen, printed out on a printer or analysed in full detail on an external PC, using the transfer through a memory stick.
